

Automatic Waste Collection System

- Centralised waste removal & filtration system for transporting & compacting cotton / synthetic waste
- Also available in metal sheet enclosure housing

PERFECT
for Affordable Technology

Centrifugal Fan

- SISW/DIDW Design as per system requirement
- Available for high static pressure up to 300 mm WG & capacity air volume up to 150000 CMH

Rotary Drum Filter

- Selection of filter media as per waste material to maintain constant pressure
- Traverse cleaning nozzles connected to high pressure material fan for continuous cleaning & waste collection

Primary Disc Filter

- Selection of filter media as per waste material to maintain constant pressure
- Removal of waste deposited on the disc by vertical nozzle through fan into fibre compactor

Fiber Compactor

- Delivery of waste in compact form
- Available for handling cotton material up to 90 kg/h & 125 kg/h
- Vertical, octagonal in shape and have Conical screw driven by geared motor
